## Profile

Adelaide Brighton Limited (ABC) is an integrated construction material and lime producing group of companies focused on the construction, engineering, infrastructure and resource sectors in Australia. ABC has three main operating divisions being: Cement, Lime, Concrete and Aggregates and Concrete Masonry Products.

## Investment Perspective by Adam Fleck 22-Feb-2017

Adelaide Brighton has delivered strong growth from exposure to strong infrastructure and residential markets. Economic conditions and consumer confidence ultimately drive private and government construction, creating volatility. Yet, a track record of controlling costs, balancing imports against local manufacturing capacity, vertical integration, selective expansions, and a prudent balance sheet help ease the burden of operating in a cyclical industry. Following the company's purchase of Central Pre-Mix Concrete, we continue to expect additional concrete or quarry acquisitions, complementing the company's vertically integrated model. Cost advantage gives Adelaide Brighton a narrow economic moat, stemming from efficient plants closely located to quarries and energy sources and access to cheap imports of clinker.

## Profile

Amcor Limited (AMC) is a global packaging company with operations across Australasia, North America, Latin America, Europe and Asia. AMC offers a range of packaging related products and services, including packaging for beverages, food, healthcare, personal and homecare, tobacco, and industrial applications.

## Investment Perspective by Adam Fleck 14-Jul-2017

Amcor is a leading global packaging company, with an extensive network of packaging plants across flexible and rigid plastic packaging. The AUD 2 billion acquisition of certain Alcan packaging businesses in 2010 was well timed and significantly increased scale and diversification. The demerger in December 2013 of its Australasian paper and packaging and U.S. distribution businesses allows the company to focus on the higher-return flexibles and rigid plastics segments, as well as increasing exposure to higher-growth emerging geographic markets. The end markets supplied, such as healthcare, food, beverages, and tobacco, are defensive in nature, which lessens exposure to changes in global consumer and business activity.

### Profile

APA Group (APA) comprises of Australian Pipeline Trust and APT Investment Trust, operates natural gas transportation business with interests in energy infrastructure across mainland Australia, including natural gas pipelines, gas storage facilities and a wind farm. APA also holds interests in a number of energy infrastructure enterprises including SEA Gas Pipeline, SEA Gas (Mortlake) Partnership, Energy Infrastructure Investments, GDI Allgas Gas Networks.

### Investment Perspective by Adrian Atkins 21-Feb-2018

APA Group is a good-quality infrastructure stock with astute internal management. It owns an unparalleled network of gas transmission and distribution infrastructure assets across Australia. As it faces less regulation than most of its peers, it achieves higher returns, particularly from organic expansion projects that increase use of the existing network. Unfortunately, industry reform threatens. Australian household and business utility bills are rising strongly from already high levels, and governments are responding with sweeping measures. For APA, this includes gas market rule changes attacking the asymmetric information advantage helping it secure excess returns. This will improve the negotiating position of customers, and will be backed up by binding arbitration if negotiations fail. Headwinds from rule changes and likely rising interest rates suggest APA's future won't be as rosy as its past.

## Profile

ASX Limited (ASX) operates Australia's primary national securities exchanges. This include the provision of securities exchange services, derivatives exchange services, central counterparty clearing services, and registry, settlement, and delivery-versus-payment clearing financial products and associated ancillary services. It also provides market data services and investor education courses.

## Investment Perspective by Gareth James 02-May-2018

We expect ASX to deliver a mid-single-digit EPS CAGR over the next five years, with its wide economic moat protecting strong margins and enabling returns on invested capital to exceed the weighted average cost of capital. The capital-light business model, along with a lack of desire to undertake acquisitions, should enable strong cash conversion, a 90% dividend payout ratio, and a debt-free balance sheet. The yield nature of the stock means we expect the share price to be largely driven by bond market movements and central bank interest rates. We don't expect competition to materially undermine earnings, despite the evolving regulatory and competitive landscape. We expect long-term growth in market value to underpin EPS growth. The relatively reliable nature of earnings influences our medium fair value uncertainty rating.

## Profile

Australia and New Zealand Banking Group Limited (ANZ) provides a range of banking and financial products and services to retail, small business, corporate and institutional clients. ANZ operates in Australia, New Zealand, Asia Pacific region, the United Kingdom and the United States. ANZ main business divisions consist of Retail, Corporate and Commercial Banking, Global Wealth and International and Institutional Banking Division.

## Investment Perspective by David Ellis 01-May-2018

The current ANZ Banking Group was established in 1951, but the brand and origins stretch back to 1835. The push into Asia and the well-regarded Australia and New Zealand franchise is slanted toward corporate and business banking, with increasing exposure to retail banking and wealth. ANZ Bank has failed to deliver higher returns than major bank peers as a result of the lower return Asian businesses. Designed to leverage fast-growing trade and investment flow, both within Asia, and among Asia, Australia, and New Zealand, the Asian growth strategy failed to deliver higher growth. The focus is now squarely on Australia and New Zealand, where household and business credit growth provides modest upside. We are attracted to the outlook for growth and earnings upside, but we acknowledge increasing risks and lower shareholder returns. The author's superannuation fund owns shares in all four Australian major banks.

## Profile

Caltex Australia Limited (CTX) is a transport fuel supplier, with end-to-end operations in refining, importing and marketing premium fuels and lubricants. It operates a refinery at Lytton in Brisbane. The company also operates with a myriad of subsidiaries; Caltex Australia Custodians, Caltex Australia Petroleum, Caltex Fuel Services, Petroleum Services, Hunter Pipe Line Company, B&S Distributors and Jet Fuels Petroleum Distributors.

## Investment Perspective by Mark Taylor 27-Feb-2018

Caltex has a strong competitive position in retail and distribution, with a premier 35% Australian market share of all transport fuels sold. However, the expansion of low-cost Asian refineries and dependence on premium-priced imported light sweet crude feedstock eroded refiner margins. Caltex reduced its exposure to uncompetitive refineries by closing one of its two plants in 2014. The company now rests on its more competitive supply chain and long-term supply agreements struck with Chevron. Group returns on invested capital have improved materially. The marketing segment is reliably profitable and fast-growing, and will enjoy increased cash flow for investment previously wasted on refining. However, the change is not sufficient to earn a moat. Caltex's business rests largely on its fuel supply chain, and in this space it wrestles with capable competition in BP, Shell, and Mobil.

## Profile

Goodman Group (GMG) is an integrated property group with operations throughout Australia, New Zealand, Asia, Europe, the United Kingdom, North America and Brazil. GMG comprised of the stapled entities Goodman Limited, Goodman Industrial Trust and Goodman Logistics (HK) Limited. GMG operates four divisions namely Property Investment, Fund Management, Property Services and Property Development.

## Investment Perspective by Tony Sherlock 19-Mar-2018

The substantial yield premium on high-quality industrial property to bonds is a key factor behind strong institutional demand for Goodman-developed product. With an outlook for interest rates to reach exceptionally low levels, we expect sustained institutional demand for industrial property. Goodman has strong growth prospects, but asset value risks are evident. Recent rises in industrial asset values have been facilitated by sharply lower interest rates, particularly given that rent growth rates have stabilised in most regions. The inevitable reversion to long-term average borrowing rates in outer years could weigh heavily on industrial property values, reflecting the dual impact of capitalisation-rate expansion and softer commercial demand for industrial space. This ever-present risk highlights the importance of premium product and financially sound tenants, a key attribute of the Goodman investment vehicles.

## Profile

JB Hi-Fi Limited (JBH) is a specialty discount retailer of branded home entertainment products. The Group's products particularly focus on consumer electronics, software (including music, games and movies), whitegoods and appliances. The company primarily operates from standalone destination sites and shopping centre locations and its online stores in Australia and New Zealand.

## Investment Perspective by Johannes Faul 29-Jun-2016

JB Hi-Fi operates more than 300 electrical and white-goods stores across Australia and New Zealand under The Good Guys and JB Hi-Fi brands. Despite the absence of an economic moat, the business has proven to be very resilient, trading strongly throughout the financial crisis as the younger target demographic continued to spend on entertainment. The industry is constantly developing new gadgets and products, which drive organic growth. Investment risk is high because uncertainty surrounds the pace of structural change to the retail industry as consumers increasingly purchase products online.

## Profile

National Australia Bank Limited (NAB) is a financial services group that provides a comprehensive and integrated range of banking and financial services including wealth management throughout Australia and New Zealand, with branches located in Asia, the United Kingdom (UK) and the United States (US).

## Investment Perspective by David Ellis 03-May-2018

National Australia Bank is one of four major banks and is Australia's biggest business bank. The Clydesdale demerger completed in February 2016 with the core and profitable Australian and New Zealand commercial and retail banking franchises now the sole focus. CEO Andrew Thorburn and senior management have started the business optimisation process and we expect consistent, high-quality earnings going forward, erasing previous disappointments and rebuilding investor confidence. Good revenue and volume growth, tight cost control and improved return on equity will feature. The share price has recovered relative to peers from a long period of underperformance. The bank has substantial exposure to the business sector, with 45% of earnings from business banking, and is well placed to take advantage of the recovery in demand for business credit. The author's retirement fund owns shares in all four Australian major banks.

## Profile

Sonic Healthcare Limited (SHL) is an international medical diagnostics company, offering laboratory medicine/pathology and radiology services to the medical community. The company is structured as a decentralized federation of medically-led diagnostic practices, with the head office in Sydney, Australia. SHL provides the services and infrastructure in eight countries: Australia; New Zealand; the UK; Germany; Switzerland; Belgium; Ireland; and the USA.

## Investment Perspective by Chris Kallos, CFA

16-Feb-2018

During the past two decades, Sonic has built a dominant position in the Australian medical diagnostics market; it is now the largest Australian pathology laboratory operator. This scale gives it a significant cost advantage, the primary source of its narrow economic moat. Sonic invested heavily throughout the six years to 2011 to establish critical mass in the U.S. and European pathology markets. The firm is now generating synergies from acquired businesses, the same strategy it implemented so successfully in Australia. We expect steady realisation of synergies in the U.S. and European markets to gradually boost margins for many years and help drive EPS growth of about 10% during the next five years. Several dynamics underpin pathology test volume globally, including ageing populations, the economic benefits of preventative medicine, and ongoing innovation in pathology testing technology.

## Profile

Telstra Corporation Limited (TLS) is a provider of telecommunications and information products and services through its Australian and offshore operations. TLS has a range of businesses namely fixed broadband, mobile, data and IP, network application & services (NAS), digital media and international.

## Investment Perspective by Brian Han 14-May-2018

Telstra is the dominant player in the Australian telecom industry. It is the clear market share leader in fixed voice, broadband and mobile services. Telstra's mobile unit benefits from a network quality advantage that underpins a 48% subscriber market share position. Government investment in the national broadband network, or NBN, will change the structure of the fixed broadband market. How management plugs the expected AUD 3 billion EBITDA hole to be inflicted by the NBN is the key long term issue facing investors, with significant bearing on sustainability of current dividends. Gearing is conservative and the group has a good track record of extracting productivity benefits and replacing lost earnings. However, TPG Telecom's planned entry into the mobile market will raise competition to another level, further underscoring the importance of cost-cuts and pursuing new growth opportunities.

## Profile

Transurban Group (TCL) manages and develops urban toll road networks in Australia and the United States of America. Company engage in the development, operation, maintenance and financing of toll road networks as well as management of the associated customer and client relationships. Company have 13 roads in Australian portfolio and in US company have 2 roads in the state of Virginia, both in Washington DC area.

## Investment Perspective by Adrian Atkins 13-Feb-2018

Transurban Group is a leading toll road owner/operator, with a portfolio of assets on the Eastern seaboard of Australia and in Virginia, U.S. Concession lives are fixed, with toll roads handed back to their respective governments debt-free at the end of the concession. The weighted average concession life of the portfolio is around 30 years. Under the leadership of Scott Charlton, Transurban has aggressively expanded its portfolio through a combination of acquisitions and greenfield projects. Toll roads have high barriers to entry and benefit from rising traffic volumes and tolls, which increase in line with the consumer price index or higher. Transurban is a stapled security, with a considerable portion of its net cash flows distributed to security holders pretax. The objective is to cash-cover and increase distributions; we project a five-year high-single-digit CAGR in distributions

### Profile

Wesfarmers Limited (WES) is a diversified business operating supermarkets, department stores, home improvement and office supplies, resources, chemicals, energy and fertilisers, and industrials and safety products. WES is headquartered in Western Australia.

### Investment Perspective by Johannes Faul 22-Dec-2017

Wesfarmers' diversified portfolio provides exposure to many segments of the Australian economy. In fiscal 2017, more than 90% of group revenue was consumer-related. The contribution to group EBIT from these operations is also above 90%. Other operations provide exposure to resources, coal mining, agriculture, and industrial gases. Wesfarmers is Australia's largest private-sector employer, with more than 200,000 employees. We believe Wesfarmers has a narrow moat, which is sourced from cost advantages derived from its significant retail scale. Return on equity is affected by dilutive equity issues associated with the acquisition of Coles in 2008, along with the company's significant goodwill, but return on invested capital (excluding goodwill) comfortably exceeds the cost of capital.

## Profile

Westpac Banking Corporation (WBC) is Australia's oldest banking and financial services group, with branches and operations throughout Australia, New Zealand and the near Pacific region as well as offices in key financial centres around the world including London, New York, Hong Kong and Singapore. The Group is organised in the following 5 Key Divisions: Consumer Bank, Commercial and Business Bank, BT Financial Group, Westpac Institutional Bank and Westpac New Zealand. Its serves nearly 13 million customers.

## Investment Perspective by David Ellis 07-May-2018

Westpac Banking Corporation is Australia's oldest bank, marking 200 years in 2017. Certain commentators view Westpac's successful home-loan growth strategy as a key weakness, but we argue that it is a core strength. Investor concerns, centred on the large exposure to residential mortgages, are overdone. The high-profile multibrand franchise in Australia and New Zealand is slanted towards retail banking, but retains meaningful exposure to the wealth, corporate, and institutional sectors. We see solid earnings upside potential, with international investors continuing to focus too much attention on negative short-term issues. A strong balance sheet, peer-leading loan quality, and impressive returns on equity underpin a solid earnings outlook. The author's retirement fund owns shares in all four Australian major banks.

# Equities Research Methodology and Disclosure

We believe that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star, or Buy-rated, stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star, or Sell-rated, stocks trade at premiums to their intrinsic worth. Four key components drive the Morningstar rating: our assessment of the firm's economic moat, our estimate of the stock's fair value, our uncertainty around that fair value estimate and the current market price. This process ultimately culminates in our single-point star rating. Underlying this rating is a fundamentally focused methodology and a robust, standardized set of procedures and core valuation tools used by Morningstar's equity analysts. In this document, we provide a detailed overview of how the Morningstar Rating for stocks is derived, and also outline the analytical work that feeds into our coverage of stocks.

## Morningstar's Economic Moat™ Rating

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define excess profits as returns on invested capital, or ROICs, above our estimate of a firm's cost of capital, or WACC (weighted average cost of capital). Without a moat, profits are more susceptible to competition. Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

## Determining Fair Value

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' independent primary research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process.

## The Uncertainty Rating

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our recommendation system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Our uncertainty ratings are low, medium, high, very high, and extreme. With each uncertainty rating is a corresponding set of price/fair value ratios that we use to assign recommendations, or star ratings.

## Generating the Morningstar Recommendation/Star Rating

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the recommendation, or star rating, is automatically re-calculated at the market close on every day the market is open. Lower price/fair value ratios (<1.0) lead to positive recommendations while higher price/fair value estimate ratios (>1.0) lead to negative recommendations.

Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted. Furthermore, we would expect our fair value estimates to generally rise over time, due to the time value of money. Specifically, over the course of a year, barring major changes to analyst assumptions, we would expect our fair value estimates to increase at the level of our estimate of a firm's cost of equity (net of shareholder returns attributed to dividends). So, for a stock that pays no dividends with a \$100 fair value estimate today and an estimated 10% cost of equity, we would expect our fair value estimate to rise to \$110 in 12 months, all else equal.

It is also worth noting that there is no predefined distribution of our recommendations. That is, the percentage of stocks that earn a Buy rating can fluctuate daily, so the recommendations, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many Buy-rated stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

Our recommendations /star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

**Buy (★★★★★):** We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential. This rating encourages investors to consider an overweight position in the security relative to the appropriate benchmark.

**Accumulate (★★★★):** Appreciation beyond a fair risk-adjusted return is likely, in our opinion. This rating encourages investors to own the firm's shares, possibly overweight relative to the appropriate benchmark after fully considering more attractively priced alternatives, such as our Buy recommendations.

**Hold (★★★):** Indicates that we believe investors are likely to receive a fair risk-adjusted return (approximately cost of equity). Concentrated portfolios might consider exiting these positions if more attractively priced alternatives are available.

**Reduce (★★):** We believe investors are likely to receive a less than fair risk-adjusted return and should consider directing their capital elsewhere. Securities with this recommendation should generally be underweight, assuming less expensive alternatives are available for the portfolio strategy being employed.

**Sell (★):** Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss. This rating encourages investors to strongly consider exiting portfolio positions in the security in nearly all strategies.
